Z Articulated Conveyor
With Separator

Z articulated Conveyor With Separator

Double curve adjustable, with the separator flap fitted as standard, one can separate the pieces that have a difference in thickness of only 2mm. The rotation of the separator is driven by a gearmotor with adjustable clutch which, besides having a safety prevention function, also has

the prerogative not to damage parts that touches. It is mounted on wheels, and is normally combined with a granulator that continuously grinds the sprues.

Fitted as standard belt supergrip for particular jobs you can install the same belts with the addition of high max 12 mm strips.
